

# Agglutination Slides for rapid diagnostics

monochrome slides, clear-view

s. pneumoniae, easy-label

white, red rings, cut-assist

black, red rings, cut-assist

multi-test slides

PathoDx® customized slides

Disposable latex agglutination test slides are developed using advanced polymer technology. The slides have a surface nature equivalent to that of glass slides, and provide an efficient agglutination platform to assist in both work and judgment.

## 5 Advantages when compared to glass slides

**1. The hydrophilic, glossy surface is similar to the surface found on glass slides**  
Specimens and reagents are able to be mixed thoroughly and efficiently. The result is an effective agglutination platform for reliable, trustworthy operations.

**2. The disposable slides eliminate contamination**

One time use disposable slides prevent the spread of infectious organisms to the user and other surface items which may lead to false positives.

**3. Hydrophobic rings provide a clear demarcation of the active working area**

The rings prevent the flow of reagents and specimens out of testing area during experimental operation.

**4. Writable surface in the area outside of the rings can accept pencil or pen**

User organization and control is vastly enhanced.

**5. The slides are easy to cut - saving both time and costs**

The user is able to create any size or number of rings as needed. Instant customization saves time and achieves results.

Other advantages include: low individual test costs, the ability to obtain semi-quantitative results, and short testing times.

## Storage and safety precautions

1. Handle with care. Do not touch or wipe the test slide surface (especially the inner ring area), as doing so can interfere with test results.
2. Store at room temperature in a clean atmosphere. Avoid high humidity, high temperature, and direct exposure to the sun.

## More information

All our test slides are available for customization (size, shape, color, font, application, etc.) - OEM orders are welcome. There are many different types and styles for numerous diagnostic and testing purposes, including:

- Pregnancy testing
- Syphilis testing
- Rubella testing
- IgM rheumatoid factors detection
- C Reactive Protein detection
- Anti Streptolysin O detection
- Anti DNP detection
- heterophile antibody detection
- and more
